

LINUX WARS

Join the Rebellion!

The battle for control over the world's computers has been raging for a decade. It's the greedy empire - a convicted monopoly with enormous resources - against the open source rebels who fight for our freedom. The rebellion is growing in strength, winning more and more battles, but to win the war we still need your support...

Join the rebellion - install Ubuntu!

Ubuntu is Linux for human beings - a free alternative to commercial operating systems such as Windows and Mac. Ubuntu can be downloaded free of charge and is very easy to install and use. Ubuntu has no viruses, spyware or license fees to worry about.

Hardware support is excellent and thousands of programs are easily downloaded and installed. An estimated 6 million people are using Ubuntu today, with numbers growing every day. Ubuntu will always remain available free of charge and will never become an evil empire since the source code is open and collectively owned by the users.

Visit www.ubuntu.com or www.ubuntu-uk.org and see why so many already have joined the rebellion!
